Research Experience

Polymer-Based Pressure Sensor for Terrain Identification - Master's Thesis

August 2022 – Ongoing

Supervised by Dr. Mitradip Bhattacharjee (Dept. of EECS)

IISER, Bhopal, India

- Developed a capacitive pressure sensor that is capable for identifying the terrain it is placed on by analyzing the pressure profile of the surface. It is also capable of detecting nature of surface and can withstand high pressure.

Wearable Printed Sensors for Monitoring Patient Health

May 2022 – August 2022

Supervised by Dr. George Knopf (Dept. of Mechanical and Materials Engineering)

University of Western Ontario, Canada

- Developing a multi-purpose printable electronic sensor circuit for a variety of wireless devices that can monitor patient health. Developed the prerequisite, chipless readout system, with RFID frequency (13.56 MHz) and the components being purely RLC based. The system is such that any sensor can be replaced into the circuit and a reading obtained.

Developing a Database of Synthetic Logic Gates using NLP and ML **May 2021 – December 2021**

Supervised by Dr. Areejit Samal (Dept. of Computational Biology)

IMSc, Chennai, India

- A database with compiled information regarding all synthetic logic gates discovered to date. The data was analysed using NLTK to give a suitable PUBMED search query and a sum total of 750+ logic gates were documented.

Phone Application For Health Monitoring - Bachelor's Thesis **June 2021 – April 2022**

Supervised by Dr. Mitradiip Bhattacharjee (Dept. of EECS)

IISER, Bhopal, India

- Developed an application that can provides data for four diagnostics (heart rate, oxygen level, blood pressure, and temperature) and predicts two diseases (arrhythmia and anemia). This is done using image processing techniques and a custom designed PCB.
